Description

The report briefs a website-based system's UI Design for food reviews named "Food Review Blog." as per Client Demand. The user interface of this Project was designed using Figma Tools to make it easier for clients to understand how the website looks.

The main idea of the project is to create a good blogger website and the main purpose is users can easily find good restaurants and healthy foods and spend their nice moment using this blogging site.

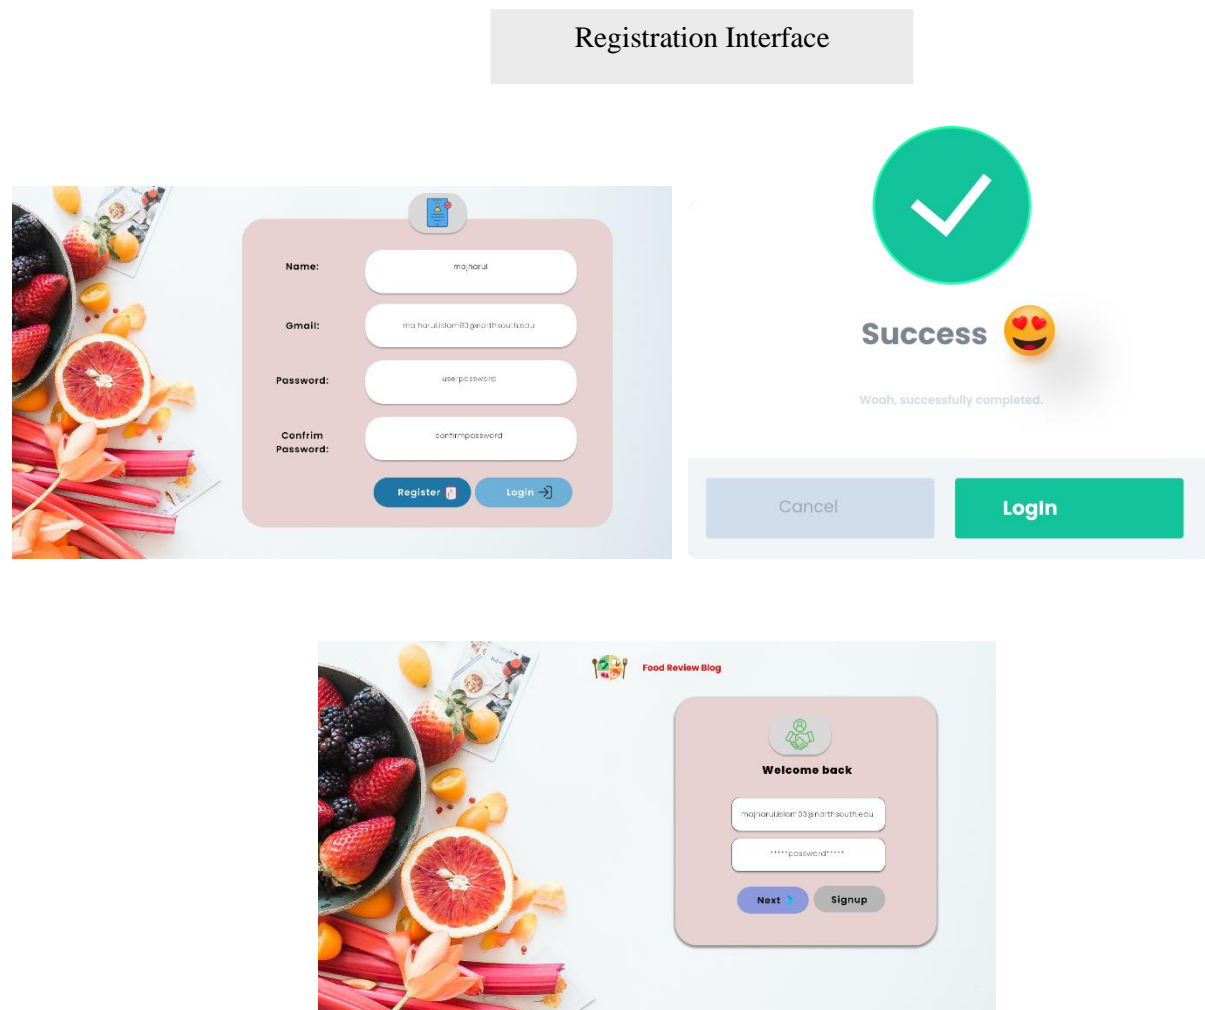

In order to achieve this purpose, we will set up a website where users can register for an account, search for restaurants in the locations of their choice, and view the menus of those restaurants. Users can also gain feedback from other users by sharing their experiences with them. Additionally, user information may be saved on our website so that a user's history may be viewed in the dashboard. The admin can similarly save necessary data. From this website people also come to know about any selected restaurant's Food Quality, Environment, Special Menu & Offer, Price, Location, Staff Behavior and so on.

This project will be containing Login, Register, Finding Restaurants Location based, Exploring their Environment, Food reviews, Payment and premium package as well.

Each user will have a profile. The user required to first register to creating A profile before being able to access the website and could share their restaurant and cuisine experiences. Another advantage of sharing posts (user) is that it allows one's to reach a larger audience. Other users could easily notice that post as a result of your encounter. The user also contributed their personal information by Managing own profile.

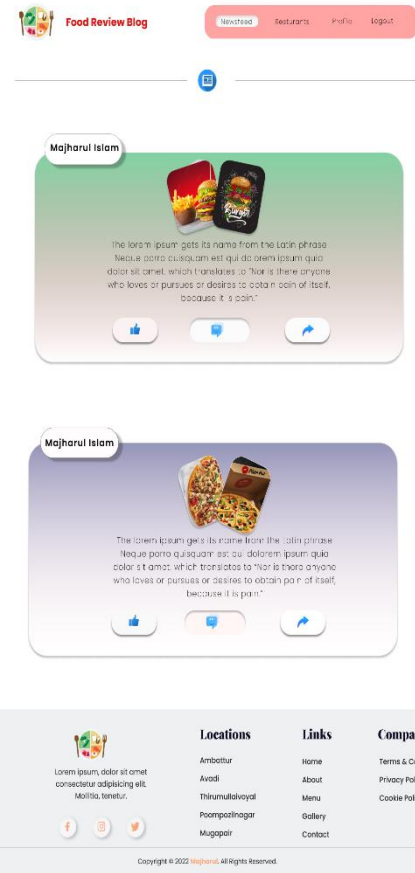

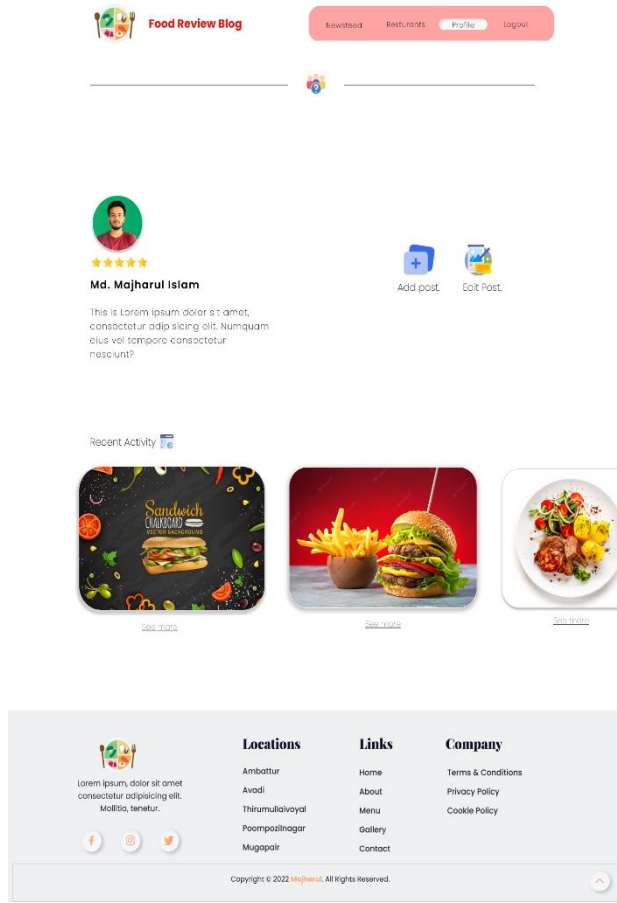

The users of this website will be able to see which Restaurants provide deals that are cost-effective, which restaurant provides offer, budget friendly. And this will give them a restaurant's personal web platform link. Users could search blog posts on the basis of price, location, or by tabbing restaurants as well as foods name. In this approach, the aim of giving appropriate and productive assistance can be accomplished.

Snap of the User Interface Design

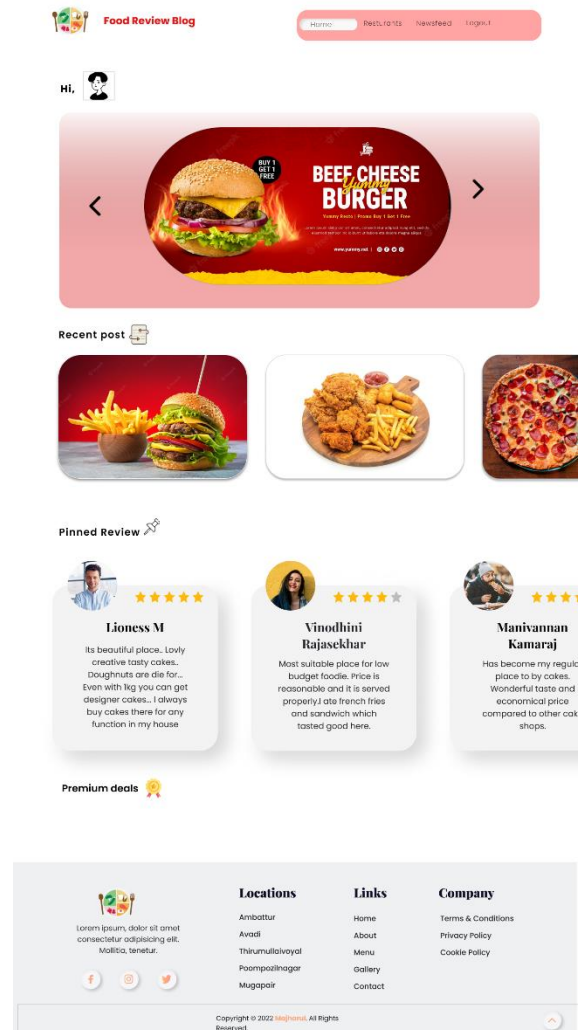

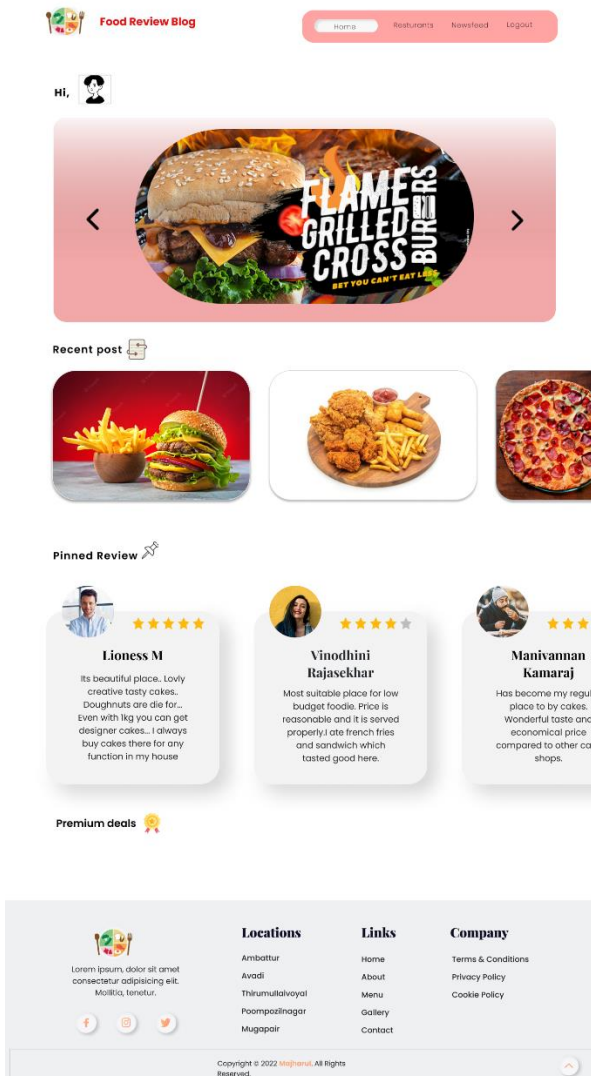

By this interface, user register his account and create a profile to using a website

User Profile Interface

Profile Interface where a registered user manages, update his profile. Also create and manage a post which is shared in his timeline. Or Newsfeed.

Home Interface

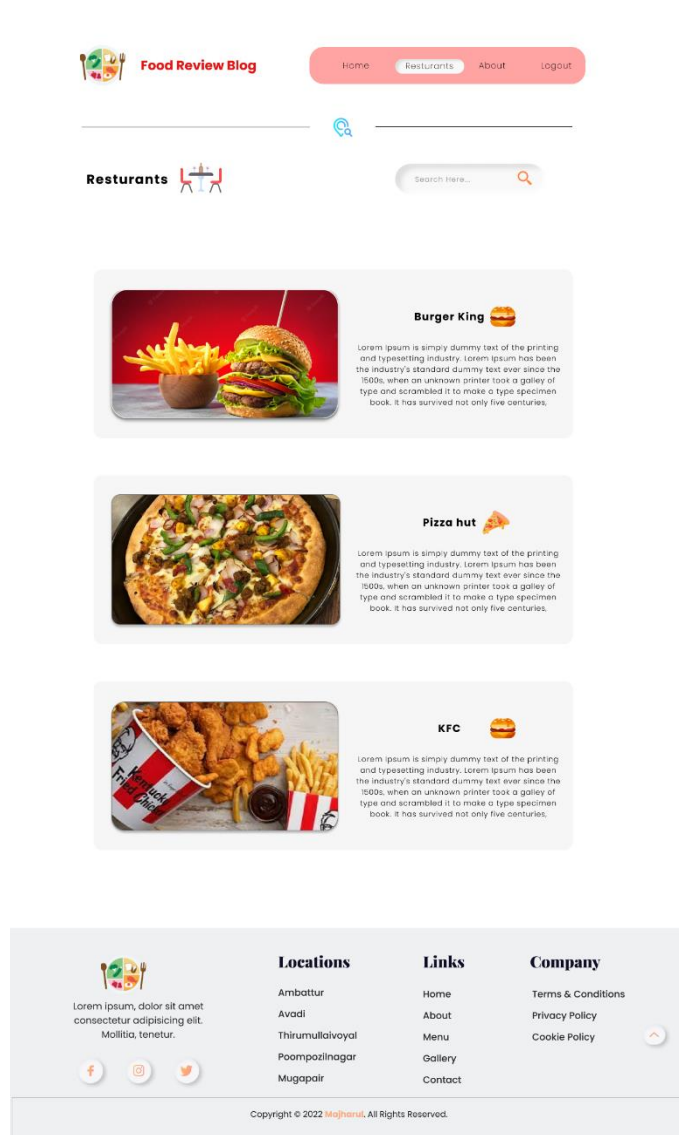

The User View of Websites

Front Interface

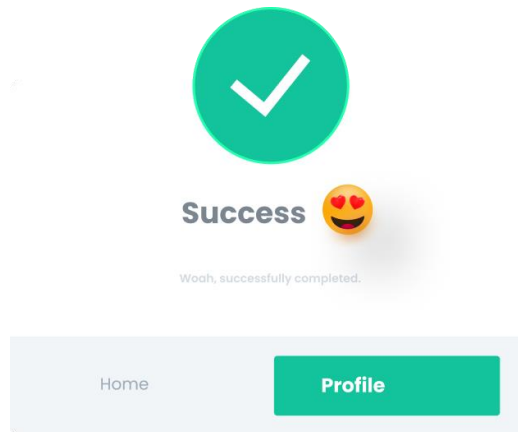

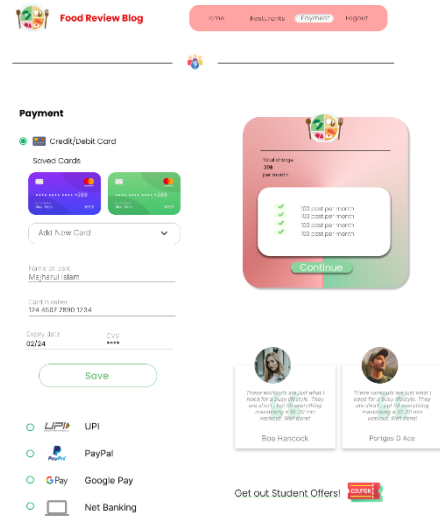

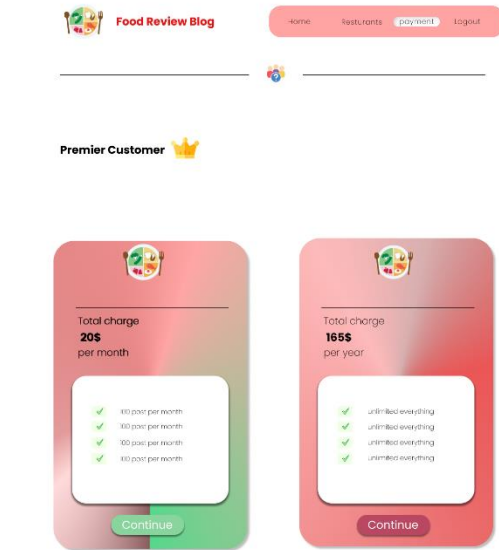

Restaurant Interface

The User View of Websites & The Restaurant View

Special User Interface

Consider a special feature where some user makes them premier profile by payment if website make any event.
